

# **STRIKE IN ECUADOR AFFECTED THE SHIPPING SCHEDULE**

*16 Oct, 2019*

This week, Ecuadorian government announced new economical measurements to promote the production, the local industry and the exports of the main Ecuadorian products and also taking care of the dollarization to keep a healthy and prosperous situation for the main of citizens.

Unfortunately, these new measurements have caused strikes all around the country, and main streets were closed hindering the regular development of corporative and social activities.

Therefore the employees of companies could not reach their workplaces to attend efficiently their activities. For the transport, shipping schedule also was unstable. Communication with their customers and agents was more difficult. If this situation continues for a long time, it may generate many costs and seriously affect the shipments transported to or via Ecuador.
